

## Wax preparation

1. Remove the hygienic safety seal and fix the collar properly. Same will become handy to receive your spatula during the application of the wax. It will also keep the container clean without any wax overflowing.
2. Use a Solo-Pil or Duo-Pil wax-heaters or similar wax heater at maximum heat (10-15 minutes) until liquid consistency. See Softening Temperature on the container.
3. Set the thermostat lower to maintain the texture liquid – but not too hot for the skin.
4. It is suggested to cover the bolero and reduce the temperature to its minimum while not in use for a long period of time so as to slow down the evaporation of essential oils.

## Instructions for use

1. Desinfect the area to be treated with the épillyss pre-epilation lotion.
2. Use a spatula to apply a thin and uniform layer of warm wax in the direction of hair growth.
3. Cover this layer of wax with a strip and smooth lightly for better adherence.
4. Use your free hand to withhold the stretched skin and seek your customer's help to hold the taut skin if necessary.
5. Hold one tip of the strip and pull in a very rapid motion in the opposite direction of the hair growth, as close to the skin as possible to avoid bruises.
6. Upon completion of hair-removing, apply Aloes post-epilation gel to reduce redness. Smooth softly with an épillyss soothing and moisturizing post-epilation product of your choice.
7. Clean your working area (instruments, table and others) with Zestasol, a 100% natural product.

## Warning

Avoid exposure to the sun or sun bed before and/or after any epilation session. The skin sensitivity has been enhanced by the UV-rays and is more subject to burns. If your customer is preparing for a special event, attend at the hair removal the day before. Never practice wax epilation on broken, burnt or irritated skin, on warts, moles, eyelashes, or nipples. Waxing should not be done on people with diabetes or under medication without prior consultation with their doctors. It is possible to see red spots on the skin or feel ticklings following an epilation session. They will disappear after a few hours. The use of the **Epillyss Aloes gel** will reduce those reactions. For the first epilation, it is suggested to test a small skin area for allergies and to wait ten minutes before pursuing further.

## Softening temperature

**Celsius :** 56° C - **Fahrenheit :** 131° F.

**Texture :** Ultra liquid.

**Ingredients :** Colophonium (Natural pine resin), Cera Alba (Natural beeswax), Parraffinium Liquidum (Liquid parraffin).

**Special touch :** C3 bioresin, Trace-elements.

**Essentials oils :** Lavendula Angustifolia (Lavender), Citrus Lemon (Lemon), Prunus Armeniaca (Apricot).

## Suggested application \*

Skin type	Hair type	Area
Hyper sensitive	Average Strong	Integral bikini Face area

*\* This application is for information purposes as the data and/or comments do apply according to the place, technique and temperature of the wax during the treatment. Our suggestions are based on comments received from our customers and itemized along the years.*

**All our waxes are made for all skin areas and all types of hairs.**

## Suggestions

Daily use of **Epillyss Vitamin E** biological cream and of the Renaissance glove will considerably reduce the dryness of the skin and the arrival of ingrown hairs. For ingrown hair areas, it is highly recommended to use the Renaissance glove while bathing or under the shower, one hour before receiving the treatment. Maximize the result of your treatment by using the **Epillyss post-epilation gel or serum** by electro-deposition (galvanic machine) after in-cabin treatments and by recommending it for use at home subsequently. In addition, the **Epillyss PFB Vanish** is excellent to reduce ingrown hairs.

# SENSOR

**ULTIMATE !** The presence of trace-elements amplifies the adherence on the hairs and reduces the traction on the skin. The incidence of extracts of lavender, lemon and minerals gives it its silky texture and aqua-pearl colour. Sensor enjoys an ultra fluid texture. Its application is very thin, therefore much more profitable. Its exceptional formula and the easiness of its application are the basis of its intense appreciation for the removal of integral bikini. It will soon be available for use in the microwave oven.

## BOLÉRO, A UNIQUE CONTAINER

Arising out of a patented alloy of ceramic, plastic and fibreglass, our Boléro is the unique wax container fitted for microwave ovens AND wax-heaters throughout the whole world. It is a great time-saver in wax preparations. Boléro can be handled easily and its plastic sealing cap ensures the cleanliness of work areas and of all sides of this special container.
